B.E. Computer Science and Engineering, Rajalakshmi Engineering College

CB23F35 - Low-Code Application Development using Zoho Creator

Course Faculty: Dr. J. Jinusophia | November 2026

The Problem

- Campus issues (Wi-Fi, projectors, electrical, plumbing) are reported by calls, messages or word of mouth
- No proof a complaint was received, and no clear owner for it
- Staff assign complaints by hand, so routing is slow and inconsistent
- No single list of open complaints, and no history to spot repeat problems

The Solution

One Zoho Creator app that registers, routes and tracks every complaint.

1

Report an Issue

Simple form: title, category, location, description, optional photo

2

Auto-assign

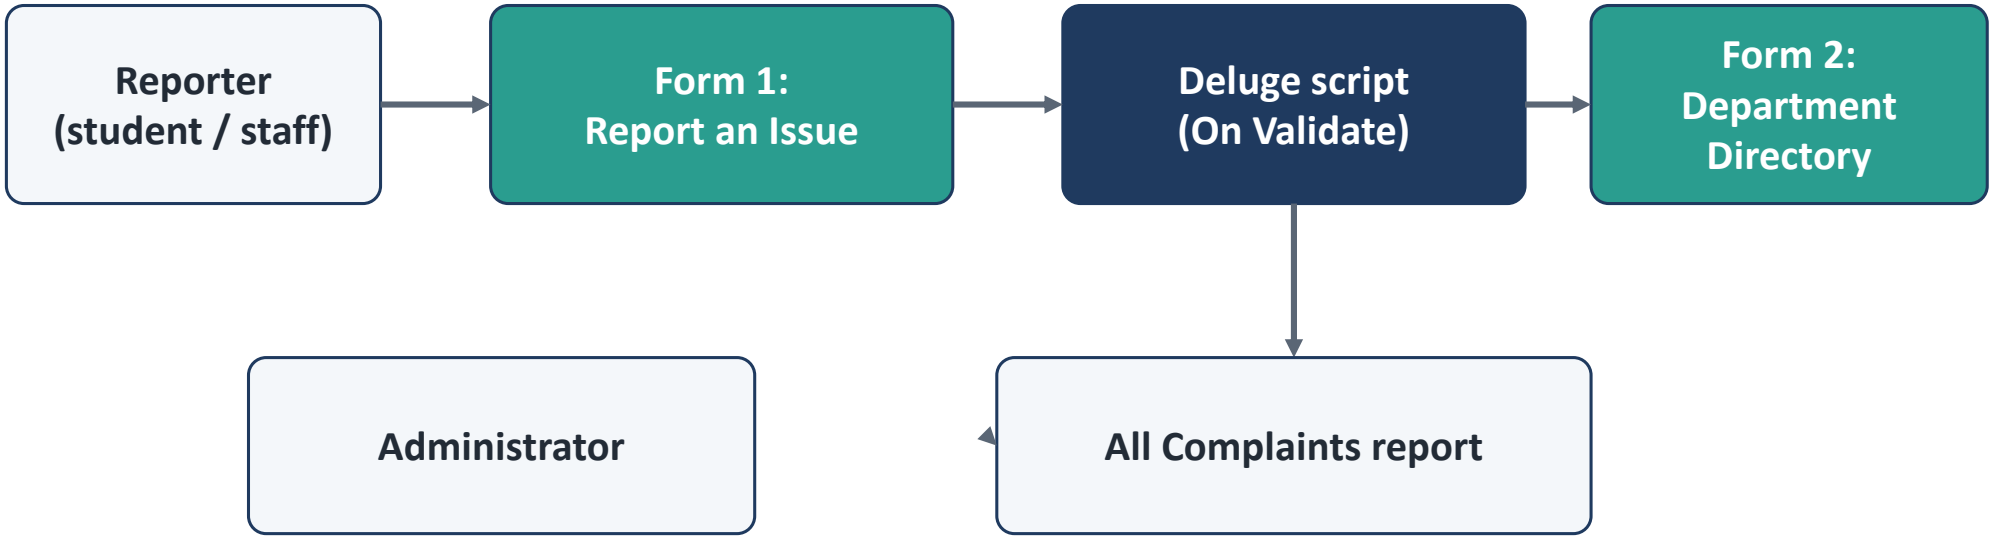

A Deluge script picks the department from the Department Directory

3

Track

Status starts as "Submitted"; the admin sees all complaints in one report

Key Architecture

Script looks up the active department for the chosen category, assigns it and sets Status = Submitted. The admin reviews and updates complaints from the report.

Impact and Benefits

- Every complaint is recorded in one place with a timestamp
- Department assignment is automatic and consistent, with no manual routing
- Clear ownership: each issue shows its responsible department
- Admin gets a searchable list, filterable by status, category and department
- Shows how low-code replaces informal processes quickly, without a custom backend

Project Details

Project	CampusFix - Smart Campus Issue Tracker
Platform	Zoho Creator, Deluge scripting
Forms	Report an Issue; Department Directory (linked by a lookup field)
Workflow	Form workflow: auto-assign department, set initial status
Reports	All Complaints; Departments list
Student	Mohamed Irshaadh (240701323), B.E. CSE, Rajalakshmi Engineering College
Course	CB23F35 - Low-Code Application Development using Zoho Creator
Faculty / HoD	Dr. J. Jinusophia / Dr. J. Manoranjini
